

Octagon Recruitment Analytics Platform

Feature & Command Reference

Live analytics on RecruitCRM — Supabase mirror, semantic layer, dashboards, a Claude (MCP) interface, and Slack.
Generated 5 August 2026.

1 What it is

A live analytics platform on top of RecruitCRM. Recruitment data syncs into a clean Supabase mirror; a single semantic layer defines every metric once; and two surfaces read from it — dashboards, and Claude via a remote MCP connector. Recruiters ask questions in plain English and take a small set of audited write-back actions. Guiding principle: **trustworthy reads before writes**.

Data flow

RecruitCRM (system of record) → sync → Supabase mirror → canonical SQL views/functions → Dashboards + Claude (MCP) + Slack. Writes go back to RecruitCRM; the mirror catches up in about 2 minutes.

2 Data & sync

The mirror is kept live by the recruitcrm-sync engine and monitored by a watchdog.

Entity	Source	Freshness
Consultants, clients, jobs, candidates	RecruitCRM list endpoints	Incremental every 2 min
Candidate hiring-stage history	/candidates/{}/history	Backfilled; write-through on edits
Call activity (Devyce)	/call-logs	Every 2 min (part of the sync)
Company status (BD)	company custom field	Every 2 min
Soft-delete reconcile	full id sweep	Nightly 03:00-03:20

Scale (approx.): 21 consultants, ~4,580 clients, ~5,970 jobs, ~16,500 candidates, ~18k hiring-stage events, ~4k recent calls.
2026 is the reliable reporting window.

3 Claude interface — MCP tools

Recruiters talk to Claude; it uses these tools over the shared semantic layer. Ask in plain English — Claude picks the tool. **Every call requires a per-user token**; identity is derived from the token (not spoofable). Reads need any active token; writes need a token marked can_write.

Read tools

Tool	Ask it like...
get_dashboard	"show the dashboard" — KPIs, funnel, per-consultant, pipeline, sync health
funnel_report	"how did Keelan do in Q2", "the tech team last month"
client_report	"how is <client> doing", "busiest accounts this year"
time_to_fill	"how long are we taking to fill roles"
cold_jobs	"which of my roles have gone cold"
placements_report	"placements this quarter", "who placed the most"
consultant_leaderboard	"top performers", "leaderboard by CVs"

Tool	Ask it like...
bd_report	"how many prospects vs clients", "BD pipeline"
find_candidate	"find Jane Smith" — resolves name to slug + current stages
job_pipeline	"what's happening on the Bosch role" — who's in play
stalled_report	"what's slipping" — aging offers + stalled candidates (firm-wide)
my_day	"what's my day" — your attention list (auto-scoped to you)
match_candidates	job description → ranked candidates by skill match, with explanation
call_activity	"call activity this week", "talk time by consultant"

Write tools (gated; two-step preview → confirm; audited; attributed to the acting consultant)

Tool	What it does
update_hiring_stage	Move a candidate's hiring stage in RecruitCRM (create_placement on Placed)
assign_candidate	Assign a candidate to a job
add_note	Add a note to a candidate or job

Every write previews the change for approval, checks optimistic concurrency (refuses if the record changed since preview), writes to a full audit log, and refreshes the mirror. updated_by is set to the acting consultant so RecruitCRM attributes it to them.

4 What you can ask Claude — command catalogue

You type plain English; Claude picks the right tool(s). These are example phrasings, grouped by what you want — not an exhaustive list, but representative of the range.

Firm overview & KPIs

- "Show me the dashboard."
- "How many CVs and placements this year?"
- "What's our open pipeline value?"
- "How many candidates are in the funnel?"

Funnel & conversion

- "What's the firm funnel for 2026?"
- "How did Keelan do in Q2?"
- "Show the tech team's funnel last month."
- "What's our CV-to-interview rate this quarter?"
- "Compare this month's funnel to last month."

Consultant performance

- "Who are the top performers this year?"
- "Leaderboard by CVs sent."
- "Rank consultants by placements in Q2."
- "How does Adam's CV-to-placed rate compare to the team?"

Clients & business development

- "How is Custom Interconnect doing?"
- "Our busiest accounts this year."
- "How many prospects vs clients do we have?"
- "Show the BD pipeline / account-status breakdown."

Time-to-fill & placements

- "How long are we taking to fill roles?"
- "Time to fill by consultant."
- "How many placements this quarter and who made them?"
- "What's our Won revenue this month?"

Find people & roles

- "Find Jane Smith." (returns her current stage on each job)
- "What's happening on the Bosch role?" / "Who's shortlisted for the Process Engineer job?"
- "Who's in play on my open roles?"

Daily workflow & attention

- "What's my day?" (your offers, stalled candidates, cold roles, recent placements)
- "What's slipping firm-wide?" / "What should we chase?"
- "Which of my roles have gone cold?"
- "Any offers aging without a response?"

Job-description matching

- "Here's a job description — find everyone who fits." (paste the JD)
- "Match candidates to this spec and explain the ranking."
- "Find candidates with these skills near Reading."

Call activity (Devyce)

- "Call activity this week."
- "Who's making the most calls?"
- "Talk time by consultant this month."
- "How many BD calls did we make?"

Actions you can ask Claude to take (write — needs a write-enabled token)

Each is **explicit-only** and **two-step**: Claude shows a preview and only applies after you confirm. It's logged and attributed to you.

- "Move Jane Smith to 1st Interview on the Bosch role."
- "Advance this candidate to Offered" / "mark them Placed."
- "Assign David to the Process Engineer job."
- "Add a note to this candidate: spoke today, keen, available in 4 weeks."

5 Claude prompts (one-click)

Prompt	What it does
weekly_team_review	Week-over-week firm funnel + leaderboard, with call-outs
my_cold_roles	A named consultant's open roles going cold

Prompt	What it does
client_health	One client's activity, open roles and conversion this year
month_in_review	A month's funnel, placements and revenue
my_day	Your personal attention list for today
match_jd	Paste a job description → ranked candidates with explained fit

6 Slack

Feature	When	What
Sync alerts	on failure (5-min watch)	Posts if a data feed stalls; recovers when fixed. Dedupes.
Admin digest	daily 08:00 UTC	Usage, top users/tools, writes, tokens, sync health, business pulse
Daily standup	Mon-Fri 08:00	Aging offers + stalled candidates on open roles
/dashboard command	on demand	Slash command returning the live dashboard to the channel

Each Slack feed is switched on by setting its webhook URL (or, for /dashboard, the signing secret) — see Setup commands.

7 Dashboards

- **Public JSON API** — /functions/v1/dashboard-data (aggregates only, no PII).
- **Static page** — web/dashboard.html: KPI cards + funnel + per-consultant + pipeline, 5-min refresh, with a sync-health banner.
- **In Claude** — auto-rendered at the start of each chat via the session-start hook.

8 Setup & admin commands

Run in the Supabase SQL editor (keeps secrets out of chat).

Mint a per-user access token (returns the token once):

```
select public.mint_mcp_token(, 'Consultant A', false); -- read-only
select public.mint_mcp_token(, 'Consultant A', true);  -- write-enabled
```

Revoke a token:

```
update mcp_tokens set active = false where label = 'Consultant A';
```

Switch on the Slack feeds (paste your webhook / signing secret):

```
update app_settings set value='https://hooks.slack.com/...' where key='admin_webhook_url';
-- daily digest
update app_settings set value='https://hooks.slack.com/...' where key='alert_webhook_url';
-- sync alerts
update app_settings set value='https://hooks.slack.com/...' where key='standup_webhook_url';
-- daily standup
-- /dashboard: set Supabase secret SLACK_SIGNING_SECRET, then add the slash
-- command in Slack pointing at /functions/v1/slack-command
```

Run a sync manually (the cron does this automatically):

```
POST /functions/v1/recruitcrm-sync?mode=incremental&entity=all
```

9 Security & compliance

- Per-user bearer tokens (stored as SHA-256 hashes); identity derived server-side, not from arguments.
- Writes gated per token; every write is previewed, concurrency-checked and audit-logged.
- RecruitCRM API token held only as a Supabase secret, never exposed to clients or chat.
- Candidate PII (names) surfaced only through token-gated tools; the public dashboard is aggregates-only.
- Call phone numbers and note text are deliberately not mirrored.
- Data hosted in the EU (eu-west-1) for GDPR; row-level security on every table.

10 Status

Area	State
Data mirror, semantic layer, dashboards	Live
Sync monitoring + alerts	Live
Claude connector: 17 tools, 6 prompts, per-user auth	Live
Write-back (stage / assign / note)	Built & gated; not yet exercised on a live record
Slack digest / alerts / standup / command	Built; need webhook/secret to switch on
Team rollout in claude.ai	Admin action (add org connector + shared Project)

Outstanding by design: one live write test to prove attribution; per-user tokens minted for recruiters; Slack webhooks set; connector added in claude.ai.

Octagon Recruitment Analytics Platform - reference generated from the live build. Internal use only (contains staff names and internal metrics when populated).
